SNICKERS WORKWEAR

We offers a wide assortment of innovative, technical workwear of high quality developed for today's working men and women.

Our head-to-toe, inside-and-out solutions consist of work trousers, kneepads, jackets and vests, tool carriers, outerwear, accessories, gloves and more. No matter size, shape or working situation, we aim to provide you with comfortable and durable workwear that suits your needs.

Our workwear families: RuffWork, FlexiWork, LiteWork, AllroundWork and ProtecWork are optimised for different types of workdays, enabling you to pick the best workwear for your tasks. We also offer a classic range of work trousers as well as garments that go well with all the families.

AllroundWork

The ultimate choice for everyday work
in all kinds of environments.

1102 AllroundWork, Waterproof 37.5° Insulated Jacket
6241 AllroundWork, Stretch Trousers Holster Pockets
1229 AllroundWork, Softshell Jacket with Hood
1367 AllroundWork, Women's Waterproof Shell Jacket

The background of the image is a photograph of a weathered industrial structure, possibly a shipping container or a large piece of machinery. It features vertical corrugated metal panels that are heavily rusted and discolored. A dark, curved cable or hose runs diagonally across the lower left portion of the frame. In the bottom right corner, a portion of a red, ribbed object, likely a fire hose reel, is visible. Overlaid on the lower half of the image is a solid green rectangular box containing the text.

FlexiWork

Body-mapped design and light ventilating stretch fabrics. The smart choice for fast paced work.

- 1940 FlexiWork, Softshell Stretch Jacket
- 6940 FlexiWork, Softshell Stretch Trousers+ Holster Pockets

9462 ProtecWork, Half Zip Wool Long Sleeve Shirt

Long-sleeve shirt made of soft wool and flame-retardant viscose that offers both protection and great comfort. High collar protects commonly exposed body parts. This shirt provides basic protection against heat and flame, antistatic as well as electric arc. Combine with ProtecWork mid- and outer-layer garments to build even more protection. Goes perfectly together with bottoms 9468.

- Soft and comfortable fabric
- High collar for extra protection
- Placket inside zipper
- Protects against heat and flame, antistatic and electric arc

EN ISO 11612:2015 A1, A2, B1, C1

EN 1149-5:2018

IEC 61482-2:2009 ATPV, 6,7 cal/cm², class 1 (4kA). HAF: 74,5%

Material: 49% Viscose FR, 49% Wool, 2% Beltron, 210 g/m²

Size: XS-XXXL

0400

9468 ProtecWork, Wool Bottoms

Long johns made of soft wool and flame-retardant viscose that offer both protection and great comfort. Wool provides natural moisture transport and great insulation, keeping you warm and dry in cold conditions. These bottoms provide basic protection against heat and flame, antistatic as well as electric arc. Combine with ProtecWork mid- and outer-layer garments to build even more protection. A perfect match to half-zip shirt 9462.

- Wool for optimal insulation
- Great stretch for a tight, perfect fit
- Protects against heat and flame, antistatic and electric arc
- Combine with ProtecWork mid- and outer-layer garments to build protection in layers

EN ISO 11612:2015 A1, A2, B1, C1

EN 1149-5:2018

IEC 61482-2:2009 ATPV, 6,7 cal/cm², class 1 (4kA). HAF: 74,5%

9787 ProtecWork, Multi Function Holster Pockets

Looking for a quick and easy upgrade of your workwear? These durable holster pockets feature several pockets and tool loops that will help you work more efficiently. Designed to be sewn on to the trousers. Holster pockets 9783 are designed to be sewn on to the trousers. If you want to wear the holster pocket as an accessory in a belt, order 9787 separately. **NOTE!** We do not recommend using these holster pockets on trousers certified according to EN ISO 11611 and/or EN ISO 11612 DE and/or EN 13034, which require that pockets should be closed.

- Based on the 6-series trouser holster pockets, but with a more advanced design
- Many electrician webbing tool loops both outside and inside the pockets
- Extra tough DuPont™Kevlar® fiber reinforcement inside tool pocket for enhanced durability
- Zipped compartment on the left pocket

Material: Main: 49% Modacrylic FR, 42% Cotton, 5% Aramid, 3% Polyamide, 1% Antistatic, 300g/m². Reinforcement: 54% Polyester 24% Aramide, 13% Polyamide, 9% Polyurethane Weight: 450 g/m²

9797 ProtecWork, Holster Pockets

Upgrade your work trousers with these stripped-down holster pockets, featuring two large pockets. Holster pockets 9793 are designed to be sewn on to the trousers. If you want to wear the holster pocket as an accessory in a belt, order 9797 separately. **NOTE!** We do not recommend using these holster pockets on trousers certified according to EN ISO 11611 and/or EN ISO 11612 DE and/or EN 13034, which require that pockets should be closed.

- Two large pockets
- Based on the 3-series trouser holster pockets

Material: 49% Modacrylic FR, 42% Cotton, 5% Aramid, 3% Polyamide, 1% Antistatic, 300g/m²

20471

4361 ProtecWork, Vest Class 3

Highly visible, flame-retardant vest that allows you to quickly and easily enhance your protection in a crucial body area as well as improve your visibility at roadworks or in low-light conditions. The vest features short sleeves in order to be certified according to Class 3.

- Heat transfer reflective tape for high visibility
- Flame-retardant fabric
- Short sleeves for Class 3 certification

EN ISO 20471 Class 3

EN ISO 14116 Index 1

Material: 100% Polyester FR

Size: M-XXL

#Inventing Workwear

Snickers Workwear's design and product development philosophy has remained the same since the company started. By bringing end-user perspective and functionality into the process right from the start and by constantly asking "Can we find a different way or a smarter solution?", founder Matti Viio invented modern workwear as we know it.

In 1975 Matti Viio, a Swedish electrician, founded Snickers Workwear. As an end user he was simply fed up with having to work in substandard workwear that looked like something that had been thrown together. He felt that he and his fellow craftsmen deserved better. With an "If it's meant to be it's up to me" attitude, Matti took it upon himself to develop workwear combining amazing fit, hardwearing comfort and advanced functionality and by doing so reinvented workwear as we know it. Our positioning statement "Inventing Workwear" embraces our history, the way we work today and extends to our promise for the future.

Hello Louise!

Is workwear really that important?

Without a doubt, we believe great workwear makes a huge difference during a craftsman's day. The choice of right workwear greatly affects work performance, how you feel and your health at work. Our goal is always to make workwear that enhances your day, makes you feel better, work better and look good.

What would you say really sets you apart in the way you develop clothes?

We have always devoted an enormous amount of time and considerable resources to the development phase. We have never been afraid to add new features even if it would entail a more complicated production process. For instance, we've gone from about 20 to 60 pattern pieces in our trousers to ensure the best possible comfort and ease of movement. The stitching work takes twice as long as for a low-price pair of trousers and requires the manufacturer to deliver to exacting standards. We know that everyone will benefit in the long run.

But is there such a big difference between the various brands?

All too often we see garments whose design leaves much to be desired.

This is usually because a simpler method of production, in other words the cheapest method, has been chosen. That is not optimal for the garment or the body, which is a three-dimensional form requiring advanced solutions in the production process

Tell us about your test pilots?

All our development work starts and finishes with the end users. Just like in Matti's day. It is the only way of ensuring that the product works and fulfils its purpose. We have test pilots across the whole of Europe. Trade professionals whom we regularly interview about their needs and wishes. We work with the pilots to test the performance, comfort, safety, quality and strength of our products.

How long do your tests last?

Obviously that depends on the product. Extensive testing was carried out when we were creating our 6-series range. A total of 50 electricians, plumbers, carpenters, floor layers and other trade professionals took part as test pilots. All in all, they tested more than 200 different pairs of trousers. The performance, comfort, durability and protective qualities of the workwear depend greatly on the material.

Louise Falcone Borg
Product Development Manager

Design & product development principles.

Never compromise on quality.

Quality is the best investment for your wallet and the environment.

Keep testing.

Involve end users from beginning to end. New techniques and solutions must always stem from functionality and be thoroughly tested.

Good workwear works with you, not against you.

Ergonomics, working comfort, safety and protection are crucial.

The sum is always greater than the parts.

Choice of textiles, garment construction, surface and edge abrasion, colorfastness, production techniques to name a few. All must work together.

Introducing Stretch.

Experience a new level of comfort and flexibility.

Why stretch?

Stretch is added to our workwear to offer you maximum freedom of movement. It is also added to specific areas of the garment to facilitate ventilation and comfort.

Stretching the limits.

Stretch is located either in the bending directions of the garment or where your body expands. For example, it might be located on the arms or on/above your knees to optimise your ability to move and use your full potential.

Slimmer fit.

Using stretch fabrics means we can tailor the garments to a slimmer fit when needed, resulting not only in a new look but a garment that follows your every move.

6241 AllroundWork, Stretch Trousers Holster Pockets

4-Way stretch

4-way stretch offers maximum flexibility in every direction. For our full stretch set of 6940 FlexiWork, Softshell Stretch Trousers and 1940 FlexiWork Softshell Stretch Jacket we have chosen the 4-way stretch, double weave technique for a more durable result.

2-Way stretch

2-way stretch only stretches in one direction and is used for garments requiring a bit more flexibility while also retaining a robust look and feel.

Nicole Rimér
Head of Design

“THE GENERAL IDEA BEHIND USING STRETCH IN WORKWEAR IS MAXIMISING THE MOVABILITY OF THE BODY. USING STRETCH FABRICS IN OUR GARMENTS MEANS WE CAN TAILOR THEM TO A SLIMMER FIT WHEN NEEDED. IT ALSO MAKES THE WORKWEAR MUCH MORE COMFORTABLE TO WEAR. WHEN YOU PUT ON THE FULL STRETCH SET, WE WANT IT TO FEEL ALMOST LIKE A SECOND SKIN. THE CLOTHES WILL NOT CONSTRAIN YOUR MOVEMENTS, ON THE CONTRARY – THEY WILL FOLLOW YOUR EVERY MOVE.”

– Nicole Rimér, Head of Design

6923

FlexiWork, Floorlayer Trousers+ Holster Pockets

Combining the best features of FlexiWork with our classic floorlayer trousers, our goal was to make the most comfortable pair of floorlayer work trousers ever made for different climate conditions, warm and cold, without compromising on durability.

The 6923 is made from a durable Ripstop fabric with mechanical stretch. In addition, the kneepad pockets are reinforced with full-stretch Armortex® fabric including DuPont™ Kevlar® aramid fibers.

FlexiWork Floorlayer Trousers+ feature easy-to-access holster pockets with a zipped compartment as well as pre-bent legs for optimal fit and an enhanced range of movement. Furthermore, tough Cordura® reinforcements at the leg ends and pockets, including the Kevlar reinforced holster pockets, provide extra durability, while an integrated, yet detachable, belt with a durable polyamide buckle ensures superior waist fit and comfort.

You only have one pair of knees.

Make sure they last a lifetime.

Hard-working craftsmen and women put more pressure on their knees than many top-athletes. The risk of knee injuries is therefore far higher among trade professionals than other occupations. By changing kneepads frequently, injuries and chronic pain can be avoided. A general rule is to use at least two pairs of kneepads for each pair of trousers.

Snickers Workwears kneepads protect wearers against short- and long-term injuries, whether they occasionally work on their knees indoors or often kneel for prolonged periods of time.

According to a survey*, only 1 in 3 Swedish trade professionals always wears kneepads. 60 per cent of respondents say they get aches and pains, mainly in their knees and back.

*Kantar Sifo, 2017

Find your position.

Efficient kneepads that stay firmly in position are crucial for a reliable knee protection. That is exactly what you get with the Snickers Workwear KneeGuard™ and KneeGuard Pro positioning systems. They allow you to adjust the kneepads at two different heights to ensure correct positioning for maximum protection and comfort.

KneeGuard Pro – how does it work?

The kneepad is fitted from the outside for extra flexibility.

Choose the right kneepad

Do you kneel down occasionally or do you spend a lot of time working on your knees? Perhaps you kneel and stand up many times a day? Choose the kneepad that best suits your working situation.

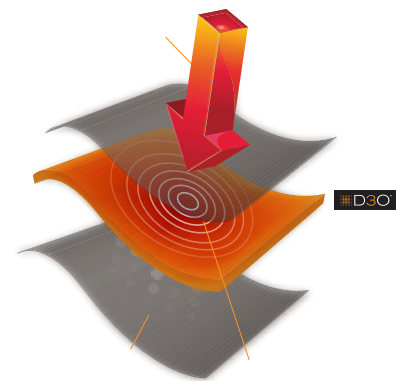

Read more about EN and ISO standards on pages 189–192

SAVE YOUR KNEES.

World-leading certified knee protection.

Our state-of-the-art kneepads incorporate D3O® technology to provide exceptional impact protection and shock absorption. Louise Wilson from the British company D3O® explains how this works.

“D3O® is a unique technology that enables us to create innovative, active materials that react differently depending on the type of forces they are subjected to. The molecules in the material flow with the movements of the user, but upon shock will lock and stiffen to absorb the energy of the impact. This means that we are able to offer a unique combination of comfort and flexibility with extreme protection when it really counts.”

D3O® technology is used in a wide range of body-protection products. It can be found in everything from clothing and footwear for motorcyclists and extreme sports athletes to PPE for the armed forces and the police.

“I think we’ll soon start seeing more solutions in personal protective equipment that are similar to those used for extreme sports, for example when it comes to protecting your head, neck, elbows and hands,” says Louise Wilson from D3O®.

Safe & ergonomic carrying systems.

At times not even the pockets on a pair of really good work trousers can accommodate all the tools you need, and it's a bit of a hassle having to lug a toolbox around. Snickers Workwear offers a choice of safe and ergonomic carrying systems that can be easily adapted to meet all needs. An ergonomic belt with leather or fabric pouches and braces or one of our tool vests – now with even more useful features.

4230 AllroundWork, High-Vis Tool vest CL1, EN 20471
This great tool vest packs high-visibility, great comfort and functionality with hardwearing Cordura® reinforcements. Instant access to all your tools in easy-to-access pockets. Heat sealed reflective tape to make sure you get noticed.

Flexi Attachment System.

This flexible system for attaching pouches onto Snickers Workwear toolbelts lets you add the pouches of your choice in any position.

9772 Craftsmen Toolbelt
2519 FlexiWork, 37.5° Technology Short Sleeve T-shirt
6903 FlexiWork, Work Trousers+

Instant access to your essentials.

The 4250 AllroundWork Tool Vest from Snickers Workwear provides quick and easy access to all your favourite tools whenever you need them. While retaining all the smart functions of its predecessor, this upgraded version benefits from several new ergonomic features including improved ventilation.

Shoulder straps and belt for ergonomic usage.

The tool vest has a height-adjusting hook and loop fasteners on the shoulder straps to adjust the carrying height of the tool vest to the optimal comfort level. But to really ensure ergonomic and comfortable usage, a lot of focus has been put on the shoulder straps and the belt.

Plenty of pockets.

The vest is made of hardwearing yet extremely comfortable Dobby Pro fabric reinforced with nylon. Featuring plenty of pockets, such as nail and tool pockets, front holster pockets with tool loops, easy-access angled rear holster pockets, breast pockets with a knife fastener and a padded cell phone compartment. All so the tradesmen have easy access to their essentials.

Practical for all seasons.

The tool vest is easy to adjust using a built-in expansion section on the front. This means it can be expanded and worn over a t-shirt, sweat-shirt or even the thickest of winter jackets.

“THE ERGONOMIC CONCEPT BEHIND A TOOL VEST IS THE SAME AS FOR A BACKPACK. WE HAVE USED WIDE SHOULDER STRAPS AND AN ADJUSTABLE BELT SO YOU CAN TAKE THE WEIGHT OFF YOUR SHOULDER.”

— Henry Lundberg, Sales Development Manager

1 Durable hanger loop.

2 Elastic for comfort and freedom of movement.

3 Durable & breathable mesh.

Extra pockets when you need them.

Easy to Personalise.

Thanks to the moveable tool pouches you get a flexible system that can easily be adapted to your requirements. The padded ergonomic belt can be combined with braces to provide extra comfort and reduce the weight on your hips.

Choose your size and material.

For the optimal comfort and fit the ergonomic belts are available in three different sizes – Small, Medium and Large, as well as two different materials for the pouches, leather or woven polyamide – just take your pick!

For safety and efficiency.

A great tool carrier system provides everyday comfort and reduces the risk of long term strain and injuries. But the added benefit is that it can make you more efficient at work. The tools you need are close at hand and easy to find, and additionally the whole belt is easy to take on/off during the day.

Textile.

9772 Craftsmen Toolbelt

In the craftsmen's version, the tool pouch features a range of compartments and loops for various tools, including a hammer holder, knife attachment buttons and pen compartment.

9782 Service Toolbelt

In the service version, the tool pouch features a range of compartments and loops for screwdrivers, pliers, utility knife and voltmeter, as well as a hammer holder and knife attachment button.

The ultimate toolbelt.

The XTR Toolbelt from Snickers Workwear takes mobile tool carrying to the extreme. With advanced ergonomic design and adjustable padded braces, taking the weight off your hips for enhanced working comfort. The unique and flexible pouch attachment system allows you to position the hardwearing leather pouches exactly where you want them. The XTR Toolbelt is available in a choice of versions for carpenters and electricians, featuring special pouches designed to facilitate each specific job. So put it on, lock the innovative aluminium buckle and bring all the nails, screws and tools you need – all the way, all day.

Adjustable braces,

Dress in layers, a tried and tested method.

It's essential to stay comfortably warm and dry during long hours of physical work. The optimal way to keep the cold, heat and moisture out is to wear multiple layers. You can wear layered clothing all year round, whatever the weather.

1.

The first layer transports moisture away from your body.

It is important to choose a good base layer to wear next to your skin in order to keep your body dry and ventilated. Forget cotton – it soaks up and retains moisture. All our base layers offer seamless comfort and a fantastic fit, but with different degrees of ventilation and warmth. Based on your activity level at work, you can choose between our three underwear families: FlexiWork, FlexiWork Merino Wool or LiteWork 37.5® for active moisture wicking.

Snickers Workwear

Base layer collection.

Our high-tech underwear comes in three different families to cover all variations in climate and physical work.

Its advanced design makes it the ultimate base layer. It provides the right warmth and comfort thanks to the breathability of the material which is crucial for ventilation and wicking moisture away from the body. The design offers seamless comfort and the clothing is based on 37.5® technology and a combination of fibres, such as polyester, polypropylene, polyamide and Merino wool. All this makes the collection suitable for different types of work over a range of different temperatures.

LiteWork with ultimate moisture-wicking properties.

37.5° functional fibres have proven capacity when it comes to climate control and wicking moisture from the skin. An added bonus is that they are naturally odour-repellent. Our 37.5° clothing is particularly suitable for intense work where the ability to ventilate excess heat is essential.

Extra ventilation knit

FlexiWork — a classic in a new guise.

We're pleased to present a new version of the classic XTR range, with an updated design and enhanced functionality. New, advanced body-mapped design and stretch fabric offer even better warmth and ventilation.

9441 FlexiWork, Seamless Wool LS Half Zip Shirt
9442 FlexiWork, Seamless Wool Trousers.
9213 AllroundWork, 2-pack Wool Socks

Socks, a good first step...

No matter what the working conditions are like, our socks will keep feet dry, warm and cool.

For example, we blend Merino wool and strong Cordura fibres for soft comfort and excellent wear resistance. And don't forget to tell your customers about our 37.5® socks. They offer the driest imaginable comfort with superior moisture-wicking performance. Unlike synthetic socks, active fibres in the material react to changes in the body's temperature to keep the wearer comfortably warm whatever the weather.

FlexiWork — for work in cold working environments.

We've blended Merino wool with polypropylene, polyester and elastane fibres to create a base layer that's designed for hard work, that ensures optimal ventilation and that will keep you warm.

2.

The second layer provides insulation.

Airy materials make excellent second layers. Our garments are designed to insulate by creating a pocket of warm air around the body. Everyone can find a personal favourite from our wide range of midlayers crafted from microfleece, fleece, knitted, pile and quilt.

3.

The third layer protects you from the rain, wind and cold.

The essential outer layer provides reliable protection from all the elements. We offer a wide selection of garments that keep you dry and warm — no matter the weather.

Stay dry in the rain.

Staying dry and comfortable is all about choosing the right type of rainwear for the job. The choice depends on several factors, from type of rainfall to how intensely you're working and how many hours you spend outside.

HOW TO DRESS TO STAY DRY IN THE RAIN

1102 AllroundWork, Waterproof 37.5° Insulated Jacket

Active work.

For 100% waterproofness during active work for a whole day in the rain, choose a waterproof garment with taped seams for maximum protection and breathability.

1107 AllroundWork, Women's 37.5° Insulated Jacket

Basic protection.

For a basic protection against water, choose a garment that is water-repellent. The garment will keep you dry during drizzle and still offer breathability.

8200 Rain Jacket, PU

Low-intensity work.

For 100 per cent waterproofness during low-intensity work in the pouring rain, choose a PU garment with welded seams.

The comfort of your lower legs matters as well.

Not only does the water fall from the sky, it also splashes up your legs when you work outside. That is why the leg ends on our workwear are usually reinforced with a fabric that repels the water. This also improves the durability of the trousers.

1102 AllroundWork, Waterproof 37.5®Insulated Jacket, 6303 Ruff Work trouser, 2905 ½-Zip Wool Sweater, 9579 Weather Dry Gloves

Cheat the wind.

Windy weather can really cool things down. Even if it's a dry and clear day, the wind can make the temperature drop quite drastically — affecting your body heat and comfort. That is why it's important to be prepared.

1207 AllroundWork, Women's Softshell Jacket
2806 Women's Zip Hoodie

Your choice of workwear in windy weather.

As for all types of weather, there are different factors to consider when you are getting dressed for a windy workday. Depending on the season, you might want to put on a base layer for warmth or to wick away moisture. Or perhaps it's more convenient to add a shell jacket that is easier to take off if the wind dies down. Of course, time is also of the essence. The longer the shifts, the more stringent the requirements for the windproof technology used in the garment. As always, your body heat plays an important role for your comfort as well. What you wear depends on your tasks for the day — will it be low-intensity or active work?

1100 AllroundWork, 37.5® Insulated Jacket

Keep warm in the cold.

If you are not dressed correctly, cold weather will relentlessly hamper your performance, reducing your mobility as well as draining your energy levels.

A high-quality shell jacket is a great item for keeping cold wind and rain out and for creating an insulating layer of air between the jacket and the mid-layer garment. However, when it's really cold or when you are frequently switching back and forth between warm and cold conditions (inside/outside), an insulated shell jacket is usually a better option since it enables you to smoothly and quickly heat up or cool down your workwear outfit. We line our insulated shell jackets with relatively thin padding to make them a perfect choice for a longer period of time during the year.

1800 AllroundWork, Waterproof 37.5® Insulated Parka

Ventilation keeps the cold out.

It's not that difficult to dress warmly when the weather is cold. However, choosing the right type of clothing requires a bit more thought. When you're working hard, your body starts to sweat. As you ease off, the moisture your body has produced will start to cool you down. In order to stay dry and comfortable, you need advanced ventilation and the ability to regulate your body heat. We therefore recommend that you to always consider the breathability features of outer garments. The breathability is determined by two factors: either by the breathability of the fabric and/or by the built-in functions for ventilation such as zips or mesh areas.

1300 FlexiWork, Stretch Waterproof Shell Jacket

Precision.

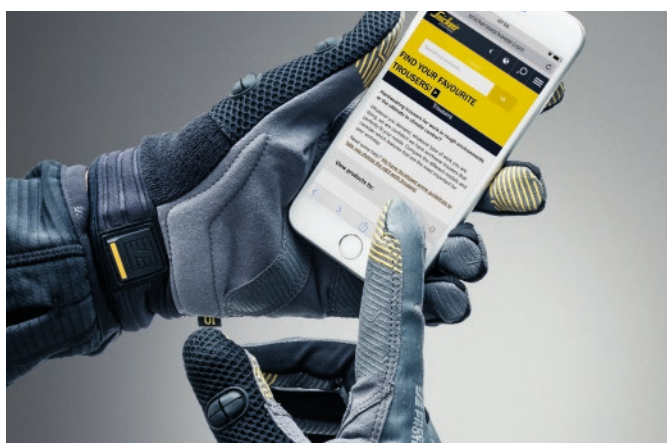

Fit to perform.

Your hands are your most important tools, so we want to give them the best. With our wide range of advanced work gloves you can count on the ultimate combination of functionality, durability and protection to match your job. Cut and sewn or seamless coated? Whatever your preference, count on cutting-edge work gloves made of superior materials with class-leading performance and working comfort.

Four families — four characters.

Precision. Light and flexible gloves with emphasis on dexterity and fit. Perfect for precision work. The flexible materials on the dorsal side of the hand, knuckle protection, cushioning and reinforcement prints provide optimal protection and dexterity.

Power. The workhorse gloves for heavy duty works like carrying, loading and tearing. The unique curved shape gives a strong and secure grip. Sophisticated patterns and durable materials create a comfort and protection never seen before.

Weather. Gloves for work in rough and cold weather. Advanced materials provide greater dexterity, friction and grip even in wet, cold and slippery conditions. These are the gloves that keep your hands warm and protected no matter what weather you work in.

Specialised. Gloves optimised for very specific tasks. With the best possible materials and unique functions. Each glove is geared to provide the ultimate dexterity, protection and comfort for each individual hand and the task at hand.

6700 Women's Service Trousers

Top-quality service.

Sharpen your profile with our Service Line.

We know you run a fast-paced operation. Performing your best and always making a good impression is everyday business, that is what our Service Line is all about.

A range of garments designed specifically to help you and your company deliver a top-quality service that your customers will remember. Whether you are in transport, distribution, maintenance, assembly, light industry or perhaps facility management, our new Service Line is ready to deliver. Combining contemporary design for amazing fit and comfort with just the right functionality, and of course, every garment is ready for your company logo.

Make an impression.

Modern workwear with a strong profile is a true image booster, and, with company profiling, you will reinforce the impression. It's a stamp of quality and helps your company stand out, making it more distinct and recognised for the right reasons.

Comfort on the move.

Every garment in the new Service Line features a modern cut for a perfect fit. Trousers with pre-bent legs, jackets with pre-bent sleeves and soft and stretchy easy-care fabric ensure maximum freedom of movement and superior working comfort.

Easy care fabric.

Our Service Line is made of durable and dirt-repellent yet soft and stretchy easy-care fabric for superior long-lasting comfort. It withstands industrial washing and retains stretch, shape and colour over the long term.

Sharpen your profile.

Doing a professional job is the best way to spread the word about your company. Combined with professional profiling you will double the impact. At Snickers Workwear we are happy to assist you with everything from heat-sealing and customised embroidery to personalised packaging. All it takes to help you show your skills.

6700 Women's Service Trousers, 2516 Women's T-shirt

T-shirt profiling.

Heat-sealing is the best choice when profiling your company T-shirts. Count on high quality in any size and colour.

Quality embroidery.

With embroidery you get quality with every stitch, but remember that words or symbols smaller than 5 mm can be difficult to read.

Foul weather garments.

When profiling your waterproof garments, heat sealing is the way to go. If you prefer embroidery, we will tape the rear of the embroidery to make sure the garment retains its waterproof characteristics.

Fleece profiling.

For a company-profiled fleece, embroidery is the obvious choice since heat-sealing might leave marks in the fabric.

Reflective stripes.

We can sew additional reflective stripes onto your work trousers and jackets. A cost-efficient solution to boost your personal protection.

High-Vis profiling.

Profiling High-Vis garments is rather special. Excessively large logos may jeopardise the classification of the garment. For optimum and safe company profiling, please contact us for more information.

Our embroidery embodies quality with every stitch. Giving your workwear an image boost that stands out in all the right ways – for a long time to come.

With our advanced heat-sealing technique you get distinctive high-quality prints in the sizes and colours of your choice.

At Snickers Workwear we only use high-quality threads to make sure your company logo stands out in the long run.

For the ultimate in company profiling, don't hesitate to talk to our experts. They know what works best and can suggest a cost-efficient solution designed for you and your company.

Personalised packaging.

When you order a range of garments for all employees we have the perfect service for you: personalised packaging. That means everyone gets all his or hers garments in a package labelled with their name. This facilitates easier internal distribution at your company and guarantees that everybody gets the right garments and the right sizes. Easy, convenient and personal.

1330 AllroundWork, High-Vis WP Shell Jacket CL3
6530 AllroundWork, High-Vis WP Shell Trousers CL2

Stay visible. Stay safe.

BEING HIGHLY VISIBLE CAN BE A LIFE-SAVER
IN HAZARDOUS WORK ENVIRONMENTS.

High-visibility clothing is a vital part of personal protection when working in dim light conditions. Our new wider range of high-vis garments offers a diverse choice of functionality and comfort for those working in these conditions.

We've restyled our most popular trousers and jackets to create high-visibility versions, and have added the features that we know customers want, such as an integrated ID badge holder and heat-sealed reflective tape instead of sewn-on reflective strips. This technology makes the material more

supple, thus allowing greater ease of movement. We know that experienced and devoted wearers of our work trousers will appreciate the Kneeguard system, preshaped legs and amazingly comfortable fit that they're used to, and they can rest assured that they'll be visible and safe while working.

For the summer months, when high visibility clothing can be a burden to wear, we offer styles with a new, airier structure that lets perspiration escape more easily.

HOW DOES IT WORK

The difference between fluorescent, reflective and contrast material.

Read more about
EN and ISO standards
on pages 189–192

The purpose of the **fluorescent** (usually yellow, orange and red neon colours) is to be visible in dusk, dawn and daylight as well as in fog or haze.

The **reflective** material, on the other hand, is designed to be visible while illuminated in dark conditions.

To be certified according to EN ISO 20471:2013, the **contrast** materials must be resistant to bleeding during washing so that they don't ruin the visibility of the garment's fluorescent and reflective materials.

The difference between orange and yellow.

It's usually easier to spot a person wearing yellow fluorescent garments compared to orange. This is because yellow has higher luminous power than orange, meaning it appears brighter to the eye from a specific angle. In a white winter landscape, however, the opposite applies. This is because orange provides a higher contrast to a white background. So, although orange has lower luminance than a yellow fluorescent material, the orange colours are more visible in a winter landscape because of higher contrast. In this case, contrast trumps luminance.

ProtecWork

A NEW COLLECTION BUILT ON YEARS OF EXPERIENCE PROTECTING PROFESSIONALS.

ProtecWork is a new collection of protective wear that combines our expert know-how of heat and flame protection with Snickers Workwear's renowned ergonomics and fit. In order to offer the best heat and flame-retardant garments, Snickers Workwear has acquired a leading brand on the Swedish market that boasts over 20 years' experience designing and developing protective wear for the energy and railway sectors. The result is a cutting-edge collection that offers inherent heat and flame protection, excellent durability, great comfort and an ergonomic, modern fit.

Developed in close partnership with professionals.

Our protective wear is the result of a long and successful partnership with professionals working in the energy and railway sectors. They're the ones working in high-risk environments, and the only ones who truly know how protective wear is used and functions in the real world. This close partnership has resulted in several innovative features, such as symmetrical leg pockets and DuPont™Kevlar® reinforced pockets.

Protective wear vs workwear.

— a matter of life and death. There's a big difference between workwear and protective wear. Workwear exists to make your working day more comfor-

table and efficient, with handy features for tools and other necessities, as well as protection against cold and rain. Protective wear, on the other hand, exists to protect the wearer from serious risks such as heat, flames, electric arcs and hazardous chemicals, or to protect the product from the wearer (against dust, dirt or electrostatic charge).

Layer up to increase your protection.

One of the best ways to improve your level of protection is to wear layers (all layers/garments must of course be certified and flame retardant). The main benefit of wearing layers is that the air gap formed between different garments provides increased protection. There is no general rating for how much increased protection the air gap

between layers provides, although we have conducted a number of tests that show that the air gap increases protection by more than 5 cal/cm².

Standards and requirements dictate our design.

Our product development always starts with the item's intended use and the task at hand. What are the risks in the work environment? What do the standards require? And what does the wearer need in order to perform optimally? Working based on these facts and requirements, and by conducting thorough tests throughout the entire process, we can develop functional, comfortable and above all safe Personal Protective Equipment.

Find out more.

Please visit our webpage to download the ProtecWork catalogue to learn more about how our protective wear can protect you from serious risks such as heat, flames, electric arcs and hazardous chemicals.

GUIDES

What's your fit?

Fit is all about how a garment follows your body. The better the fit, the less you notice the garment – it should be in total harmony with your body. That's why one fit doesn't work for everyone, since our bodies are all different and so are our opinions on what's comfortable and looks nice. Snickers Workwear offers three different fits: Slim fit, Regular fit and Loose fit for both men and women. Remember that regardless of which fit you prefer, it's important you choose the right size to achieve the best functionality and safety from your workwear.

Slim fit

6241

Slim fit garments are figure-hugging and quite tight, giving you a slimmer look. However, they are also soft, stretchy and follow your every move.

Regular fit

6200

The garments follow your body shape, but are not tight. There is room for air between the garment and your body.

Loose fit

3214

The loose fit garments sit securely at the waist as the regular fit but the legs are wider and airier. All trousers in the 3-series have loose fit.

Women's fit

1207

8017

6701

2806

6701

1367

Our women-specific workwear is based on proven and popular men's styles, but are shaped to fit the female anatomy. Women's fit includes wider hips, a narrower waist and a 3D design across the chest for optimal comfort and freedom of movement.

Measure right — for a good fit.

Carefully follow our measuring tips below to make sure you get the right size. Snickers Workwear keeps all standard sizes in stock for speedy deliveries (see specific garment for the standard size range). We also offer special sizes — delivery may take a little longer, but it's well worth it. Outside sizes are available to order with 50% extra surcharge.

Important measurement tips.

1. Get help from someone to take your measurements.
2. Take measurements dressed in body-tight underwear.
3. Measure tight against/around your body, but without the measuring tape being pulled so hard that it “cuts” in.
4. When measuring the inside leg, make sure the measuring tape is firmly extended.

A. Body length.

Top of the head to the sole of the foot

B. Chest.

Chest width, horizontally at the widest place.

C. Waist.

Waist measurement - measure horizontally at navel height, or under the stomach if you are a large size.

D. Seat.

Seat width, horizontally at the widest place.

E. Inside leg.

Crotch to the sole of the foot. Extremely important measurement to ensure the kneepads end up in the right position.

SIZE 50
MEN

Every CE-marked garment has to have a label with a pictogram that shows the size and the body measurements of the person that the garment is intended for. This means that you always can check inside the garment to see the size.

9431 XTR Body Engineered Long Johns
9432 XTR Body Engineered T-Shirt

Getting the right size.

1. Choose the right size chart below:
3XXX for 3-series trousers
6XXX for 6-series trousers
2. Look for your body measurements in the chart and choose the corresponding size.
3. To ensure an optimal fit – try them on for real!

All measurements are body measurements.

2	Hand length	MM	171	182	192	204	215
	Minimum length of glove*	MM	230	240	250	260	270

* If the glove is made for a specific application, it is possible to depart from the requirements of minimum glove length if it is stated in the user guide.

ENSURE YOU GET OPTIMALLY FITTING GARMENTS – **TRY THEM ON FOR REAL!**

A. Body length.

Top of the head to the sole of the foot.

B. Chest.

Chest width, horizontally at the widest place.

C. Waist.

Waist width, horizontally at navel height.
Important measurement for one piece
trousers and overalls.

D. Seat.

Seat width, horizontally at the widest place.

E. Inside leg.

Crotch to the sole of the foot. Extremely
important measurement to ensure the
kneepads end up in the right position.

High-tech materials at work.

OEKO-TEX®

The OEKO-TEX® label indicates the additional benefits of tested safety for skin-friendly clothing and other textiles.

The International OEKO-TEX® Association is an independent test institute, testing textiles for harmful substances according to OEKO-TEX® Standard 100 for textile products of all types which pose no risk whatsoever to health.

CORDURA®

An extremely tough and hardwearing material, used to reinforce exposed parts such as pockets, knees and sleeves. It is also water and dirt repellent, easy to care for and retains its shape.

It is a high technology fabric made with air-textured polyamide fibres able to meet the toughest standards of strength and durability. CORDURA® is a trademark of INVISTA Inc.

Armortex is a DuPont™ Kevlar® fiber used to help provide strength, flexibility, and lightweight protection in everything from yarns and woven ballistic fabrics to ropes and apparel. It's lightweight, durable and extraordinarily strong and used to make a variety of clothing, accessories, and equipment safe and cut resistant.

Hipora®

Hipora® is a waterproof and breathable membrane used for gloves. It keeps your hands dry and comfortable.

Hipora® is a trademark of Kolon Industries.

Poron® XRD®

Poron® XRD® Extreme Impact Protection. Flexible and lightweight shock absorbing foam material. The impact force dissipates and is distributed over a larger area, resulting in lower stress to the wearer. Poron® XRD® is a trademark of Rogers Corporation.

Thinsulate™

Thinsulate™

Thinsulate™ insulation has very high insulation properties compare to its weight. The fine fibres that make up Thinsulate™ insulation, work by trapping air molecules between you and the outside. The more air a material traps in a given space, the better it insulates you from the cold outside air.

Thinsulate™ is breathable, moist-resistant and machine washable. Thinsulate™ is a trademark of 3M™.

APS

A 3-layer construction developed to keep wind, water and dirt out while maintaining high breathability.

AVS

Breathes while it keeps your body dry – transporting sweat and moisture away from your skin.

AIS

A lightweight and soft micro fleece fabric. It's an ideal mid-layer for any outdoor activity with its insulating and high moisture transportation ability.

D3O[®]

D3O[®]

D3O[®] smart materials specialise in impact protection and shock absorption. Its unique patented polymer composites contains a chemically engineered dilatant as an energy absorber. The material's molecules flow freely in standard conditions, but on impact, they lock together to absorb and disperse energy, before instantly returning to their flexible state. This unique characteristic provides enhanced impact protection, while providing versatile and flexible materials that

can be manufactured for a host of impact protective applications. Note: D3O[®] does not "go hard".

Snickers Workwear uses different D3O[®] material grades specially tuned for a wide range of temperatures that offer enhanced cushioning, long-term comfort and superior impact protection on key contact areas.

GORE-TEX[®]

Technical garments with GORE-TEX[®] are extremely durable, waterproof and are guaranteed to keep you dry and comfortable – all day long. The GORE-TEX[®] membrane has over 1.4 billion pores per square cm and the pores are 20 000 times smaller than a drop of water, but 700 times bigger than a molecule of moisture vapour. This prevents

water from penetrating, while it aids your body's natural cooling process by allowing perspiration vapour to escape. Special GORE-SEAM[®] tape ensures that all seams are 100% water proof. GORE-TEX[®] is a trademark of W. L. Gore & Associates, Inc.

37.5[®]

In fabrics with 37.5[®] technology, patented natural active particles permanently embedded at the fibre level capture and release moisture vapour. Not only do these active particles provide 800% more surface area to the fibre, they also provide a unique driving force to remove moisture vapour from the skin. By actively responding to body heat, the

particles use this energy from the body to accelerate the vapour movement and speed up the conversion of liquid to vapour, significantly increasing drying rates. This means the hotter the user gets, the stronger the driving force removing moisture becomes—and the more comfortable the garment remains. 37.5[®] is a trademark of Cocona, Inc.

Patent and Registered Community Design (RCD)

Innovation and product development are at the very core of the Snickers Workwear brand. As a result of this intense focus, many of our advanced products or solutions feature registered patents. Many products are also covered by Registered Community Design (RCD). In this catalogue, products with registered design or with functions included in patent applications or patents are marked with the symbols below. For further information, please visit snickersworkwear.com.

This product is patented or has a patent application in selected countries both within Europe and world wide.

This product has a Registered Community Design (RCD), or national design registrations.

CE Marking.

Personal Protective Equipment (PPE) Regulation (EU) 2016/425.

EN 14404 Knee protection.

This standard includes the size, force distribution, penetration resistance and user testing of kneepads.

Type 2 – integrated knee protection

Work in a kneeling position involves the risk of chronic conditions such as prepatellar bursitis and cartilage injuries caused by continuous pressure on the knees. Knee protection is therefore recommended for all work in a kneeling position. The protection should distribute forces evenly and prevent hard objects on the ground from causing injuries. It is important that knee protectors do not compromise venous drainage in the leg while kneeling or standing up. It must therefore be easy for workers to change position and to stand up to re-establish a normal blood circulation at frequent intervals while wearing knee protectors. We use Type 2 knee

protectors in our products. For this type, the knee protection is integrated with the trousers, which means that wherever you go your knees are always protected. For Type 2 setups, the knee protectors and the trousers are co-certified, ensuring safe and secure protection.

Various levels of protection

Knee protection is also classified in three performance levels. Level 0 includes knee protectors suitable only for use on flat surfaces and providing no protection against penetration. Level 1 and 2 items, however, are suitable for use on both flat and non-flat surfaces in harsher conditions and provide protection against penetration at forces of various degrees.

EN 342 Protective clothing against cold.

EN 342 specifies the requirements and performance of clothing designed to protect against cooling of the body in cold environments. It is possible to certify single garments as well as an entire outfit in several layers.

Wearing several layers is a great way of increasing insulation and enhance the protection against cold. The layered outfit also makes it easy to adjust to rapid temperature changes.

Remember that sweating should be avoided during continuous cold exposure, since moisture absorption will progressively reduce insulation. In addition, wind increases the need for protection.

EN 343 Protective clothing against rain.

Rain doesn't only make you wet, but also cold, hampering your work performance.

EN 343 specifies the performance and requirements of clothing protecting against rain and vapor. The norm defines the water penetration resistance of the garment's fabric and seams and water vapour resistance. Both features three classifications – 1, 2 and 3 – where classification 3 indicates the best performance.

Remember that although a certified product protects against rain, the wearer can still be wet and cold from the inside through heavy sweating and lack of efficient ventilation (breathability) in the garment. To minimize the accumulation of moisture vapor (sweat) from the body, the user should choose garments based on the work intensity. The higher intensity, the higher breathability is needed, and vice versa.

EN ISO 20471 High visibility clothing.

EN ISO 20471 specifies requirements for clothing capable of signaling the user's presence visually. Performance requirements are included for color and retro reflection as well as for minimum areas and for the disposition of fluorescent and reflective materials.

The norm includes three different classes where class 3 has the highest visibility. For each class, the norm dictates the area and placement of the fluorescent, reflective and contrast

materials, respectively. None of the fluorescent and reflective materials can replace the other in calculating areas as the purpose differs.

Garments can be combined to reach a higher visibility and class. However, it's not always that 1+2 equals 3. It all depends on the size of the area of the respective material (fluorescent and reflective).

EN ISO 11611

Protective clothing for use in welding and allied processes.

EN 11611 specifies material performance and design requirements for clothing developed to protect against heat and flame and welding. Essentially the welding version of EN 11612, this norm defines protection against ignition from various heat sources, such as open flames, molten iron splash and contact heat. In addition, garments certified according to EN 11611 protect against radiant heat from the arc as well as minimize the possibility of electrical shock by short-term, accidental contact with live electrical conductors.

EN 11611 features two classes, Class 1 and Class 2, depending on the type of welding technique used. Class 1 comprises less

hazardous welding techniques and situations, lower levels of spatter (splashes of molten metal) and radiant heat, whereas Class 2 includes more hazardous welding techniques and situations, higher levels of spatter and radiant heat.

The norm also includes several design requirements, such as that suits should completely cover the upper and lower torso, neck, arms and legs, and that external pockets should be covered by flaps at least 20 mm wider than the opening of the pocket.

EN 13034

Protective clothing against liquid chemicals.

Specifying the requirements for clothing offering limited protection against liquid chemicals, EN 13034 targets professions and situations in which the wearer relatively easily can step out from the risk environment and quickly remove the garment. Typical professions include truck drivers who drive gasoline transports and service technicians who occasionally handles lubricants, acids etc. For tougher environments with higher risks, higher protection garments are required.

The classification Type 6 refers to full chemical overalls whereas Type PB refers to partial body protection, for example jackets and trousers.

The norm's design requirements state that the garment should include no features that may collect liquid chemicals and hold them onto the fabric surface (such as unprotected pockets etc).

NOTE! Since liquid chemicals often are flammable, the user should wear antistatic clothing for optimal protection as well as flame retardant clothing. EN 13034, EN ISO 11612 and EN 1149 make a great combination for this purpose.

EN ISO 11612

Protective clothing against heat and flame.

EN 11612 specifies performance for clothing designed to protect from heat and/or flame (not including protection for firefighters and welders). The norm indicates protection against ignition from various heat sources: (A) limited flame spread, A1 surface ignition and A2 edge ignition, according to test method ISO15025; (B) convective heat and open flames, according to test method ISO9151; (C) radiant heat, according to test method ISO6942; (D) molten aluminum splash, according to test method ISO9185; (E) molten iron splash, according to test method ISO9185; and (F) contact heat (flat iron, hot plate etc.), according to test method ISO12127-1.

Garments certified according to EN 11612 should be used together with other protective clothing that meets the re-

quirements of EN 11612. Furthermore, the norm requires full protection of arms and legs, which means t-shirts and shorts do not meet the EN 11612 requirements. However, the user can wear clothes certified according to EN 14116 (which does not have the same design requirements) underneath for enhanced protection.

To ensure full protection, the head, neck, hands and feet must be covered with other approved protective clothing. Note that garments classified as underwear should always be worn together with outer garments that meet the protection requirements of EN 11612. The underwear will not provide the right level of protection on their own.

EN ISO 14116

Protective clothing against flame.

EN 14116 specifies the performance of protective clothing for workers exposed to occasional brief contact with open flames with no other thermal risks. This norm is a "lighter" version of EN 11612 and is relevant for garments without full-length sleeves and legs as well as accessories such as hats, beanies, balaclavas, socks, underpants etc.

EN 14116 is available in three different indexes – 1, 2 and 3, where Index 3 stipulates the highest protection requirements. Materials classified as Index 1 must not be worn next to skin and garments that contain Index 1 materials should only be worn on top of Index 2 or 3 garments.

EN 1149-5

Protective clothing electrostatic properties.

EN 1149-5 specifies material performance and design requirements for protective clothing with electrostatic properties. These protective clothes are designed to avoid the risk of incendiary discharge (the formation of sparks), when for example an elbow or a knee is brushed against a wall or similar surface/object. This is vital when working with flammable materials such as gas or gasoline.

The material performance is based on the material's surface resistivity, electrical resistance and charge decay. In order to

be fully protected, all non-complying materials and conductive parts (zippers etc) should be fully covered. In addition, the person must be properly earthed by wearing shoes that allow static electricity to dissipate into the ground.

NOTE! EN1149-5 certification is not sufficient for work with fine electronics and similar sensitive electronics (microchips, printed circuit boards, cell phone assembly, etc). For this kind of work, you need protective clothing certified according to EN 61340.

IEC 61482-2

Protective clothing against the thermal hazards of an electric arc.

Despite all cautions, a large number of electric arc accident occur every year. IEC 61482-2 specifies requirements for clothing protecting against the thermal hazards of an electric arc. These clothes belong to the Risk III category, which defines garments used in high-risk environments, and are certified to eliminate second-degree burns in the event of an electric arc flash (flashover).

Electric arc protection is all about protection against energy, measured in calories (cal/cm²). In order to measure the product's level of protection, the garment is subject to two different test methods: Open arc test and Box test. The test methods use different test set-ups, arc configurations, test parameters, test procedures and result parameters. The test methods' results can be neither physically compared nor mathematically transformed into each other. The arc rating has to be tested and assessed either to the one or to the other method.

For the Open arc method, the test results are specified as ATPV (Arc Thermal Performance Value) or E_{BT50} (Energy Break-open Threshold; when holes begin to form in the fabric). Neither value is better than the other. Basically, garments/fabrics that get an E_{BT50} value are typically more insulating than they are strong and ATPV garments/fabrics are usually stronger than they are insulating. In a box test, the object is subjected with a directed arc flash of either 4kA (class 1) or 7kA (class 2)

NOTE! All garments worn must protect against electric arc! Including underwear, socks, gloves, underpants and t-shirts or shirts worn underneath the outer layer. And remember that the more layers of electric-arc-protective clothing you wear, the higher your protection.

EN 388

Protective gloves against mechanical risks.

This standard applies to all kinds of protective gloves in respect of physical and mechanical aggressions caused by abrasion, blade cut, tear, puncture and, if applicable, impact. A performance level is determined according to each test result – the higher the number or ascending letter, the greater the level of protection. Results are displayed using a pictogram, permitting clear understanding of the capability of the glove.

a. Resistance to abrasion: based on the number of cycles required to abrade through the sample glove. The resistance to abrasion is measured by the number of cycles required for hole to occur. Highest protection is 4 and is equal with 8000 cycles.

b. Circular blade cut resistance: based on the number of cycles required to cut through the sample by a circular rotating blade at a constant speed. The result is compared with a reference material and an index is obtained. Highest protection is 5 and is equal with an index of 20.

c. Tear resistance: based on the amount of force required to tear the sample. The resistance to tear is defined as the force necessary to propagate a tear in a rectangular specimen slit half way along its length. The specimen shall be torn totally apart. Highest protection is 4 and is equal with 75 Newton.

d. Puncture resistance: based on the amount of force required to pierce the sample with a standard sized point and speed (10 cm/min). Highest protection is 4 and is equal with 150 Newton.

In all cases, 0 indicates the lowest level of performance, as follows. These are the requirements for each performance levels. The performance level is displayed alongside the pictogram.

e. Straight blade cut resistance: based on a straight blade drawn across the sample until cut-through takes place and measures the contact load applied to the blade to make a cut-through over a 20 mm stroke length. The performance levels range from 'level A' cut resistance with a contact force between 2N and 5N, up to 'level F', with a contact force greater than 30N.

f. Impact resistance: This is an optional test and is used for gloves which incorporate specific impact-resistant properties which may be added to the palm, back of the hand or the knuckles. Testing is carried out in accordance with clause 6.9 of EN 13594:2015 – 'Protective gloves for motorcycle riders'. A marking code 'P' is added for gloves meeting the impact-resistant requirements.

Performance level	0	1	2	3	4	5
a. Abrasion resistance (cycles)	<100	100	500	2000	8000	–
b. Blade cut resistance (factor)	<1.2	1.2	2.5	5.0	10.0	20.0
c. Tear resistance (newton)	<10	10	25	50	75	–
d. Puncture resistance (newton)	<20	20	60	100	150	–
Level	A	B	C	D	E	F
e. Straight blade cut resistance (N)	2	5	10	15	22	30
f. Impact resistance	Approved (P)			Not approved (blank)		

EN 407

Protective gloves against thermal risks.

This standard specifies thermal performance for protective gloves against heat and/or fire. Snickers Workwear has gloves with resistance to flammability.

a. Resistance to flammability

(performance level 0 – 4)

b. Contact heat resistance

(performance level 0 – 4)

c. Convective heat resistance

(performance level 0 – 4)

d. Radiant heat resistance

(performance level 0 – 4)

e. Resistance to small splashes of molten metal

(performance level 0 – 4)

f. Resistance to large splashes of molten metal

(performance level 0 – 4)

Gloves must achieve at least Performance level 1 for abrasion and tear strength.

X=performance level not tested.

Resistance to flammability: based on the length of time the material continues to burn and glow after the source of ignition is removed. The seams of the glove shall not come apart after an ignition time of 15 seconds.

Contact heat resistance: based on the temperature range (100–500 °C) at which the user will feel no pain for at least 15

seconds. If an EN level 3 or higher is obtained, the product shall record at least EN level 3 in the flammability test. Otherwise, the maximum Contact heat level shall be reported as level 2.

Convective heat resistance: based on the length of time the glove is able to delay the transfer of heat from a flame. A level of performance shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Radiant heat resistance: based on the length of time the glove is able to delay the transfer of heat when exposed to a radiant heat source. A performance level shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Resistance to small splashes of molten metal: the number of molten metal drops required to heat the glove sample to a given level. A performance level shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Resistance to large splashes of molten metal: the weight of molten metal required to cause smoothing or pinholing across a simulated skin placed directly behind the glove sample. The test is failed if metal droplets remain stuck to the glove material or if the specimen ignites.

EN 511

Protective gloves against cold.

This standard applies to any gloves to protect the hands against convective and contact cold down to –50 °C. Protection against cold is expressed by a pictogram followed by a series of 3 performance levels, relating to specific protective qualities. Highest protection is 4.

a. Resistance to convective cold: Performance level 0–4.

Based on the thermal insulation properties of the glove which are obtained by measuring the transfer of cold via convection.

b. Resistance to contact cold: Performance level 0–4. Based on the thermal resistance of the glove material when exposed to contact with a cold object.

c. Permeability by water:

0 or 1. 0 = water penetration after 30 minutes of exposure.

1 = no water penetration.

X=performance level not tested.

All gloves must also achieve at least performance level 1 for abrasion and tear according to EN 388.

Washing advice.

Keep clean to satisfy the standard. And to increase the product's service life.

Your workwear and PPE garments must always be clean to be safe and satisfy the standard. Garments covered in dirt will significantly decrease visibility and other properties and may thereby put you in danger. Frequent washing will also help materials last much longer since dust and dirt may destroy fibres by abrasion. A longer service life for the product is good for both your finances and the environment. The flame and heat protection in protective clothing made of fabrics with inherent flame-resistant properties cannot be washed or worn out. In fact, regular washing ensures that the garments do not contain any dirt or flammable particles that will compromise the protective properties.

Washing machine.

- Read and follow the washing instructions on the garment's care label.
- Make sure to close all zippers, (press) buttons, hook and loop fasteners, etc. and turn the garment inside out before putting it in the washing machine to prevent damage to the fabric.
- When washing garments with reflective details (reflective stripes etc.), you should always wash the garments inside out. The reflectivity of any reflective material will be reduced every time garments are washed without being turned inside out. Note that damage to the flame-retardant, visibility or reflective properties of the material may not be visible to the naked eye.
- Fill the washing machine to reduce the number of washing cycles.

Detergents.

- Use organic detergent that is friendly to the environment and your skin to prevent skin irritation.
- Use special wool detergent for woollen garments.
- Do not use more detergent than necessary in order to protect the environment and the fabrics and to avoid lumps of detergent on your clothes.
- Do not use softener, as it may reduce the performance of the fabric as well as contain many hazardous chemicals that are not always listed on the label.
- Softener and soap-based detergents should always be avoided when washing PPE garments as they leave traces of either fat/grease from soap or chemicals that could counteract the properties of the fabrics.

Temperature.

If the clothes are only slightly dirty, use lower temperatures in order to save energy and protect the fabrics. Washing at 40 degrees instead of 60 degrees saves almost 50 per cent energy.

Drying.

- Insofar as is possible, dry outside in the air or on a drying rack. However, certain garments must be tumble dried at a high temperature to retain their properties – read the label carefully.
- When using a dryer, do not use a higher temperature than necessary in order to save energy, avoid shrinkage and protect the fabrics.
- Do not let the garments stay in the washing machine after washing, hang them on a drying rack immediately in order to prevent creases.

Materials.

- To protect fabrics, reflective tapes and prints, turn the garments inside out before washing them.
- Wool is a natural product that can keep itself clean; it does not need to be washed as often as cotton or man-made materials.
- The garment's care instructions should be followed particularly carefully when washing rainwear. Some rainwear has sealed tapes that can be damaged during wash and dry cycles, and other rainwear garments must be tumbled dried or ironed to renew the water resistance.

Never mix certified and non-certified garments.

You should never mix certified garments with non-certified garments in the same wash, since non-certified garments may bleed colours and/or chemicals that will damage the certified garments.

Damaged garments.

If the garment has been exposed to chemicals or heat/flame, it must be carefully examined to make sure that the fabric is undamaged. If a certified garment needs to be repaired, you must only use approved/certified materials and fabrics.

Need Class 3?

COMBINE THE RIGHT GARMENTS FOR A HIGHER LEVEL OF VISIBILITY.

High-visibility clothing is grouped into three different classes, with Class 1 being the lowest on the scale and Class 3 the highest. The classes are based on the levels of visibility provided by the garment's fluorescent and reflective materials. And for each class, the EN ISO 20471:2013 norm dictates the area and placement of these materials, which translates into Class 3 garments having a large area and prominent placement of both fluorescent and reflective materials.

This also means that the garment's size is a decisive factor in the classification, since it directly affects the total area of the materials. If you wear a small size it can therefore be difficult for you to reach the required level of visibility. But don't despair, as you can increase the visibility and attain the desired class by combining several garments.

Please consult the table below to find out which garments and sizes you can combine to reach the required visibility class.

A unique product family

HULTAFORS GROUP offers a dynamic range of premium brands to rely on – for distributors and craftsmen alike. Each brand within the Group is united with a common passion: to keep craftsmen at the forefront in terms of functionality, safety, protection and overall productivity.

Hultafors Groups is proud to present eight leading brands that together offer a unique product family for professional craftsmen.

Each brand represents expertise in its particular area and brings unparalleled knowledge and insight into the unique on-the-job challenges encountered by craftsmen. This makes it possible for us to meet, even anticipate, evolving demands by designing innovative

state-of-the-art products that make the craftsmen's workday safer, easier and more productive.

Excelling in brand-driven product categories within the industry and construction equipment sectors, we offer customers and users a best-in-class experience. And by using our high-value products as well as benefitting from brands built around their needs, craftsmen can be at the forefront every day and take great pride in their work.

Snickers Workwear

– INVENTING WORKWEAR.

Snickers Workwear is one of the leading brands in the workwear industry in Europe. Workwear for craftsmen who want the ultimate in on-the-job safety, protection and functionality

Dunderdon

– THE PRODUCT MAKES THE BRAND.

Always offering honest, timeless and casual design. Dunderdon's products should represent the highest craftsmanship and innovation, while never compromising on fit and style.

Johnson Level

– JOB SITE TOUGH.

Johnson Level offers a complete range of levels, lasers and measuring tools to help professional users do their work more accurately, quickly and reliably.

Hultafors

– TOOLS TO RELY ON.

Hultafors is a leading international brand offering innovative state-of-the-art hand tools with the best possible functionality, precision and reliability. Designed for construction and industry.

Hellberg

– WHEN HEARING MATTERS.

Hellberg Safety develop and supply hearing protection, face protection and communication solutions for all people exposed to excessive noise at work.

Toe Guard

– SAFETY WITHOUT COMPROMISE.

The Toe Guard brand represents safety without compromise, timeless design and affordable products. Our aim is to offer great products at competitive prices.

Wibe Ladders

– SAFETY IN EVERY STEP.

Wibe Ladders is the leading Nordic manufacturer of innovative tradesmen's ladders, trestle steps and scaffolding that help trade professionals work more safely and efficiently.

Solid Gear

– ONE STEP AHEAD.

Solid Gear provides utility footwear for professional workers. We insist on nothing less than perfection and make sure that every detail counts. Step into our shoes and experience true passion for shoe making.
